# OneNDA Pathway

## When to use

You've probably spent hours over your career drafting and reviewing NDAs. Once you have them signed, you then need to locate where you have filed them. We've adopted the OneNDA template, which has been designed and drafted by top law firms in the UK, the US, and Australia. It's also been adopted by many large international businesses, consultancies, and professional service organizations.

Select the OneNDA Pathway Template as a stand-alone Pathway. We've provided three versions of the document for you to select from. Once you've selected the one you want to use, complete your organisation's details and then save it as Your template. Now anyone drafting an NDA will have the same format to use. You can even send it out for signature directly from the Phundex Platform. Depending on which e-signature system you use, it may be automatically populated back onto Phundex. Each time you send a document for e-signature our helpful hints will remind you which e-signature system will automatically send the document back to Phundex, and which ones you'll need to upload separately once signed.
