## When to use

oneDPA – making Data Protection Agreements more straightforward.

Widely known for their oneNDA product, [TLB Law](#), the leading legal design, operations and transformation legal design authority, has also produced oneDPA for data protection agreements in conjunction with Claustack and PWC. We've incorporated their playbook, process flow map, and documents into this Phundex Pathway to streamline how you deal with data protection agreements. You can use these to create your own DPAs via Phundex by following the playbook and process map to ensure you select the correct provisions of the SPA, the modules and the IDT Agreement.

You can also use the link for the automated process and then upload the final version into the relevant Phundex Platform.

### Phundex oneDPA Pathway

We've included all oneDPA's materials to make accessing and completing your data protection agreements easier. In the first Stage, we include the oneDPA process map to allow you to work through which document(s) you'll require to meet your circumstances, as well as the oneDPA playbook that walks you through the process. In the second Stage, we include all of the documents referenced in the process map and pathway to allow you to complete the documents as required. As a final option, you can also use the link to Contractpodai's site to [Complete your DPA](#).
